Expt No: 01 DATE: 25-07-2026

COMPARISON STUDY OF LOWCODE DEVELOPMENT VERSUS TRADITIONAL APPLICATION DEVELOPMENT APPROACH

AIM:

To compare traditional Application development & low code Application development based on their features Advantages & disadvantages.

Features of traditional Vs Lowcode:

TRADITIONAL DEVELOPMENT	LOWCODE DEVELOPMENT
Required programming knowledge	Minimal coding Required.
Developed using languages like java, python, C# etc.	Uses drag & drop interface
Longer development time	fast development time
High flexibility & customization	Limited Customization
Suitable for complex application	suitable for simple to medium Business app

Advantages of traditional Vs Lowcode

Traditional development

* Highly customized
* Suitable for large & complex projects
* Better control over application design and performances
* supports advantages integrations

Low code Development

* Faster application development
* Required less coding knowledge
* Reduces development cost
* Easy Maintenance & updates.

Disadvantage of Traditional Vs Low code

Traditional development

* Time consuming
* Require skilled developers
* Higher development & maintenance cost
* Longer testing and deployment proces

Low code Development

* Limited customization option
* Vendor dependency
* May not be suitable for highly complex ap
* Licensing costs for enterprise platforms

Comparison of Traditional Vs Low code Development

Traditional development	Low code development
Take more time to develop applications	Develops Applications much faster
Requires strong programming skills	Requires little (or) no programming knowledge
Highly flexible & customizable	Limited customization options
Higher development & maintenance cost	lower development & maintenance cost

12/9/25

RESULT:

Thus Traditional development offers high flexibility and customization, while low-code development enables faster Application development with minimal coding. The Suitable approach depends on the projects requirement.
