SURVEY REPORT ON EMERGING TRENDS IN LOW-CODE APPLICATION DEVELOPMENT

AIM:

To study the emerging trends in low-code application development & understand how low-code platforms are changing the software development process.

INTRODUCTION

Low-code application development allows users to create applications using visual interfaces, drag and drop components and minimal hand-written code. It helps organizations develop applications faster & makes application development accessible to users with limited programming experience.

EMERGING TOOLS

1. AI-Assisted Development
AI is increasingly used to generate code, workflows and application components.

2. Mobile Applications Development
Low-code platforms provided tools for quickly creating responsive mobile applications.

3. Cloud-Based Development
Cloud platform enable applications to be developed, deployed, and managed online.

4. Workflow Automation:
Business use low-code tools to automate repetitive tasks and business process.

5. Integration with APIs:
Modern platforms provide easy integration with databases, APIs and third-party services.

6. Citizen Development:

Non-programmers can build simple business application with minimal coding knowledge.

Advantages

Fast development, reduced development effort easier maintainence rapid prototyping & improved collaboration between technical and non-technical users.

CONCLUSION:

Low-code application development is becoming an important approach for building applications quickly and efficiently. The integration of AI, cloud computing, automation, APIs, and citizens developme is expected to further increase the adoption of low-co platforms.

12/9/25

RESULTS:

The emerging tools in low-code application development were surveyed and their role in simplifying & accelerating application development was understood.
